Asset Mapping

Introduction

Asset mapping is a tool used to **identify** and **mobilise** the existing skills, knowledge, relationships, organizations, physical infrastructure, and other available resources within a patient engagement project. By **identifying** and **mobilizing** these assets, team members can work together to address challenges, foster collaboration, and promote inclusivity.

Activity

Identify: Recognize your assets and map/record them below.

Mobilise: Consider where you will foster collaborations and what resources you will use to do this. What other resources will you need to amplify your efforts?

EMPaCT Asset Mapping Values:
- **Strengths-based**: Viewing challenges and problems as opportunities for growth and learning; and shifting the focus from deficits and limitations to potential and possibilities.
- **Relationship Driven**: Seeking to build linkages among people, institutions, and organizations.
Structural: Factors that contribute to social, economic, and environmental well-being.
- Identify:
- Mobilise:

Institutional: Formal organizations, institutions, and networks within a community that provide services, governance, and support.
- Identify:
- Mobilise:

Community: The resources, cultural traditions, community networks, and shared values present within a community.
- Identify:
- Mobilise:

Individual: Personal skills, knowledge, experiences, talents, and qualities.
- Identify:
- Mobilise:
